

Phishing Real

Simulate phishing attacks against your organisation in an efficient, controlled and effective manner.

Introduction

Phishing Real was initially developed by our internal penetration testing team to enable fast and efficient phishing campaigns to be targeted at client organisations and staff. The system has been developed further to enable it to facilitate 'self-service' usage.

Key Features:

- Easy to use, Phishing Real can be accessed via any standards compliant web browser and is a 'point and click' solution requiring minimal technical knowledge on the part of users.
- Activity logging enables you to report upon emails sent, individuals targeted (recipients), subsequent recipient clicks and activities such as login attempts.
- Multiple campaign targets with different objectives:
 - **Fully Customisable NHS Login Screen** – see whether your staff will try to log in to an N3 hosted login page which reflects your own organisational branding. *Note that the system does not capture or store sensitive user details.*
 - **NHS Mimic Site** – use our default NHS phishing website, designed to look and feel like a well known NHS service, to try and lure your staff into visits and login attempts.
 - **Awareness Campaign** – after clicking on the link in a phishing email the recipient is shown a phishing email awareness web page.
 - **Custom URL** – direct recipients of your phishing emails to a URL of your choosing such as an intranet or web page.
- Use your own custom email content or one of our pre-prepared email templates.
- Send emails that appear to have been sent from your own domain, one of our 'test' domains or, subject to your subscription, any domain.
- Monitor activity via summary and detailed activity reporting.
- Anonymously benchmark campaign response rates and activity against similar campaigns of other users.
- Target large numbers of staff efficiently through the 'Address Book Upload' feature which allows target recipient email addresses to be easily imported.

Phishing Real

Simulate phishing attacks against your organisation in an efficient, controlled and effective manner.

Benefits:

- Raise awareness amongst your staff of phishing email attacks, one of the most common forms of attacks aimed at staff.
- Comprehensive reporting allows you to determine how susceptible individual staff and staff groups are to phishing emails.
- Anonymously benchmark your results against other organisations using Phishing Real.
- Identify the effectiveness of your organisations training and awareness activities.

Comprehensive & easy to comprehend campaign reporting:
